

ROCK RIVER

BEGINING OF CLIFF

NOTES

1. Contractor to call J.U.L.I.E. for a utility location prior to beginning work.
2. All vegetation to be flush cut with grade and treated with a 20%-30% triclopyr (e.g., Garlon 4E) and basal oil mixture as soon as possible after cutting. During the growing season a second application will be required prior to vegetation reaching a 3 foot height. Site conditions may require other chemicals used to kill vegetation as described in specifications. In all chemical applications follow manufacturer's recommendations.
3. All vegetation removed at Cedar Cliff to be stacked into burn piles. Trees over 2" to be cut into 10 foot lengths.
