

NOTES

1. Contractor to call J.U.L.I.E. for a utility location prior to beginning work.
2. All vegetation to be flush cut at grade and treated with a 20%-30% triclopyr (e.g., Garlon 4E) basal oil mixture as soon as possible after cutting. During the growing season a second application will be required prior to vegetation reaching a 3 foot height. Site conditions may require other chemicals be used to kill vegetation as described in specifications. In all chemical applications follow manufacturer's recommendations.
3. Remove all vegetation that can be removed with a forestry mower except vegetation marked to save. Take precaution to avoid oaks and hickories.
